### **Active Weather Warnings, Watches and Advisories by County:**

http://www.wrh.noaa.gov/hazardSummary/?state=ca&bycounty=1

### **WEATHER SYNOPSIS BY REGION**

#### **NORTHERN CALIFORNIA**

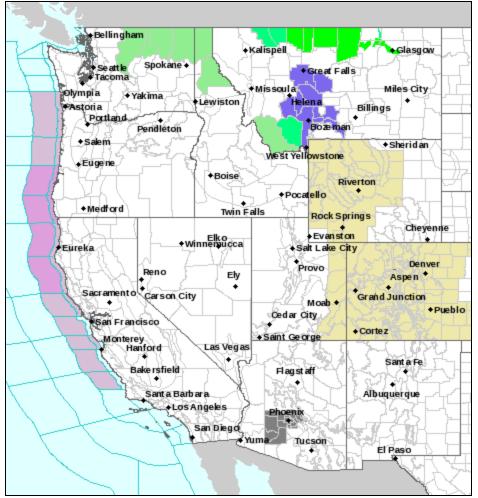

High pressure building in from the eastern Pacific will produce warm and dry weather into the early part of this week. Afternoon temperatures will be 10-15 degrees above normal and minimum afternoon humidity in inland areas will be 10-20%. Northerly winds will gust to 25 mph or so in wind-prone areas from the western Cascade-Sierra slopes to the foothills on the west side of the Sacramento Valley during nights and mornings. The only exception to this pattern is a weak disturbance passing to our north today that will produce a few more clouds and slightly cooler temperatures. Low pressure dropping in from the Gulf of Alaska will begin to produce more clouds and S-SW winds during the middle of this week, and we'll see an increasing chance of showers from this low later in the week.

#### **SOUTHERN CALIFORNIA**

This weekend, highs will climb into the 60s in the mountains and into the lower 90s across the San Joaquin Valley, the low desert as well as inland valleys of the region. Minimum relative humidity will be in the teens for 4-6 hours each day, but light winds and clear skies should allow for good recovery each night. There will be extensive areas of night and morning low clouds along the coast which may spread toward the intermediate valleys this morning. Quiet and seasonably warm weather will continue into the first half of this week, but long range models indicate a weak cutoff low pressure may bring cooler and breezier weather back to the district Thursday. Isolated showers may also be possible by then over Central California, but no significant rain or offshore winds are expected the next 7-10 days.
